

Mid Facelift (Rhytidectomy)

1 What is it?

This is an operation to lift the cheek through an incision in the lower eyelid. It helps to rejuvenate the central third of the face ie under the eyes and improves the lines that run from the side of the nose to the corner of the mouth. It lifts the slumped cheek back up to where it used to be in youth and totally refreshes the face.

2 Who should have a Mid Facelift?

If you have a sunken or tired appearance under the eyes or have noticed a line between your cheek and your lower eye bags.

3 Who shouldn't have a Mid Facelift?

As with all surgery, smokers should not be operated on as it significantly reduces their recovery. More specifically for this operation, it should not be performed on patients who suffer with dry eyes.

4 Why is it more expensive for a Mid Facelift?

This is a more extensive dissection and so it takes longer and has slightly increased risks. It also needs lots of skill and expertise to ensure the best results.

5 What results can I expect?

You should have a natural, refreshed look with a harmonious contour from your lower eye towards your cheek.

6 Who is most suitable for this type of surgery?

A consultation will help you decide the best procedure for you. Mr Lambe will have to fully assess your lower lids and suitability for the operation considering the results you wish to achieve.

7 How do I book?

You will need a private consultation to discuss your personal requirements as everyone is different.
